Fictional medical chronology

Alex Testcase • SYN-2024-001 • Seven-page fictional packet

Hand-authored example for testing Lexamed. This is an incomplete draft, not clinical advice or measured AI output. Use PDF viewer pages 1–7. Printed footers on pages 3–7 restart at 1 and are not the citation page numbers.

2024-03-12 Progress note

The worker reported lumbar pain after the February 1 lifting incident and denied prior back injury. [PDF p. 3]

Source quotation: Denies prior back injury.

2024-03-28 Lumbar MRI

The MRI described an L4-L5 disc protrusion contacting the left L5 nerve root. PDF page 7 repeats this report. [PDF p. 4]

Source quotation: Findings: L4-L5 disc protrusion contacting the left L5 nerve root.

2024-05-06 Procedure note

A left L4-L5 transforaminal epidural steroid injection was performed. Post-procedure pain decreased from 7/10 to 3/10. [PDF p. 5]

Source quotation: Post-procedure pain reduced from 7/10 to 3/10.

Chronology continued

2024-06-10 Functional history

The follow-up records walking and driving limits and continued modified duty. Its pronouns vary; verify identity and attribution. [PDF p. 2]

Source quotation: Driving is limited to 20 minutes.

2024-06-10 Follow-up note

The worker reported approximately 50% relief after the injection, pain 4/10, and continued modified duty. [PDF p. 6]

Source quotation: Work status: Continued modified duty. Re-evaluate in 6 weeks.

Questions to resolve

The packet records a denial of prior back injury, but it does not independently establish whether a prior injury occurred. Do not infer causation or apportionment from these examples.

PDF page 7 duplicates the March 28 MRI on page 4. Page 2 varies its pronouns; verify attribution. Source matching does not establish clinical meaning or completeness.
